OBS Analog Clock Documentation
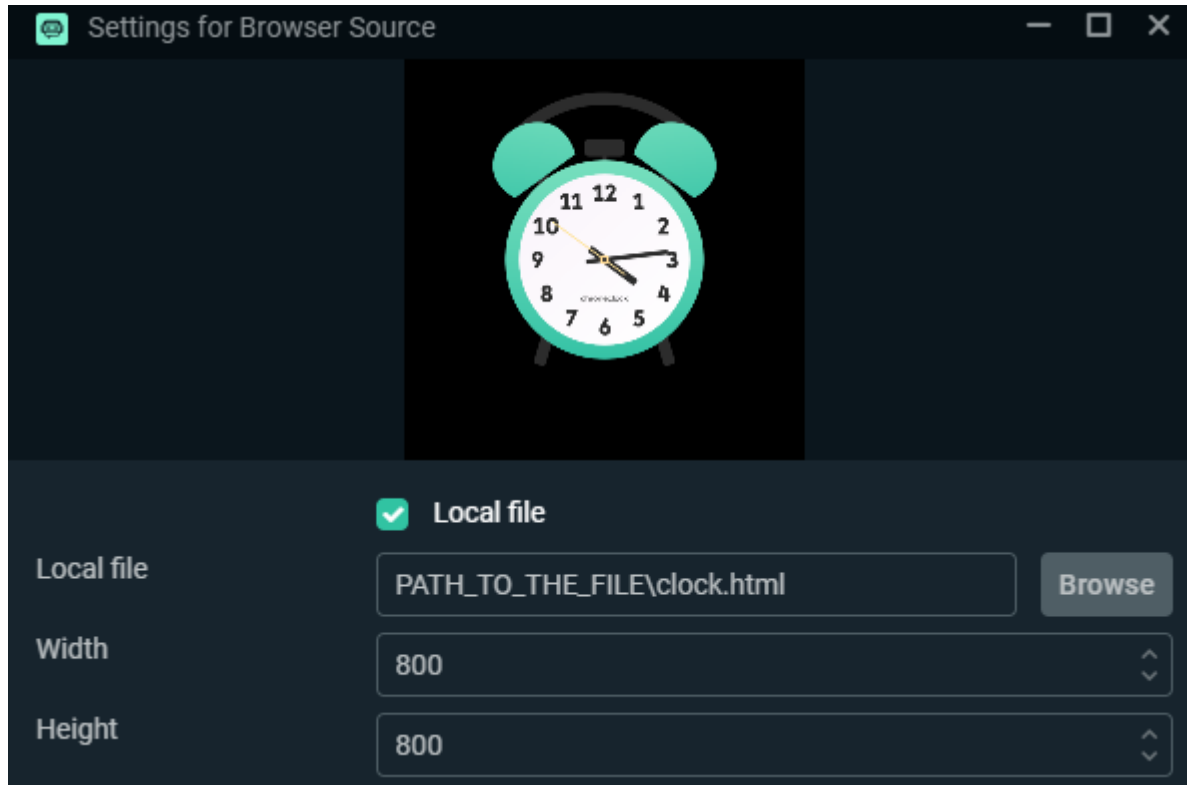

Usage

This is made to be used on OBS as browser source.

Setup guide

1. Create a browser source element in OBS
2. Set as Local file and link it to the clock.html
   Set the size as 800x800

3. Crop the empty part of the clock and zoom it

Customize guide

You can create your own clock by replacing these images

1. Clockbody.png – The clock body, could be just circle or anything.
2. Hour.png – The hour hand
3. Minute.png – The minute hand
4. Second.png – the second hand

The images are displayed in this order clock body->hour->minute->second from bottom to top.

The images have to be CENTERED at the clock part.

The hour, minute, and second hand points UP and put the rotation point in the center

All images are to be saved in same size and in 1:1 ratio

Replace the images in the "img" folder and your clock is ready to go. Refresh your browser source for it to take effect.
